Summary

Senior Software Engineer with 10+ years of experience designing and building cloud-native applications using .NET, Node.js, TypeScript, React, AWS, and Azure. Experienced in distributed systems, serverless architectures, API development, and cloud modernization initiatives. Proven track record of improving system performance, reducing infrastructure costs, and delivering scalable solutions for fintech, insurance, smart TV, and enterprise software industries. Currently pursuing a Master's degree in Applied Artificial Intelligence.

Experience

Dyamanto Chiapas, Mexico (Remote)
Sr. .NET Software Engineer January 2026 – Current

Working for ICW, an American Insurance Company

Technologies C#, .NET, AWS Step Functions, AWS CDK, XML, Snowflake

- Designed and established the architecture of a serverless data processing platform using C#, .NET, AWS Step Functions, and AWS CDK, defining infrastructure patterns, dependency injection strategies, and application structure standards.
- Developed and maintained ETL workflows integrating multiple data sources, including XML files, fixed-width text files, and Snowflake databases, enabling automated data ingestion and transformation processes.
- Collaborated with cross-functional teams to define system requirements, troubleshoot production issues, and improve overall platform reliability.

Infovision Nuevo Leon, Mexico (Remote)
Sr. Software Engineer May 2024 - January 2026

Working for Vizio, an American Smart TV manufacturer.

Technologies NodeJs, TypeScript, AWS Lambda, AWS SDK, Google Assistant, Amazon Alexa, C#

- Performed log analysis and root-cause investigations to diagnose system issues, including API request throttling and service performance anomalies.
- Developed and maintained voice-control integrations for Google Assistant, Amazon Alexa, and internal voice recognition technologies, enhancing user interaction and accessibility.
- Planned and executed the migration from Node.js 14 and AWS SDK v2 to Node.js 18 and AWS SDK v3, completing the project before the support deadline while maintaining service reliability and minimizing operational risk.

Kambda Nuevo Leon, Mexico (Remote)
Sr. Software Engineer May 2021 – May 2024

Working for Goodleap, a U.S. based fintech company that provides financing and software solutions for sustainable home improvements.

Technologies NodeJs, TypeScript, AWS Lambda, AWS SDK, C#, .NET, GraphQL, Serverless Stack (SST)

- Architected and delivered a long-running AWS Lambda-based reporting solution using Serverless Stack (SST), Node.js, and TypeScript, enabling automated generation of sales reports.
- Designed and implemented GraphQL APIs, including queries and mutations, to deliver new business capabilities and optimize data access patterns.
- Contributed to the development of a scalable event-driven architecture, implementing event-based integrations and asynchronous processing across distributed services.

Epicor Nuevo Leon, Mexico
Sr. Software Engineer March 2020 – May 2021

Epicor is a SaaS provider of ERP, CRM, SCM, and HCM that are aimed at the manufacturing, distribution, retail, and services industries.

Technologies .NET Core, C#, Angular, Azure Cosmos DB

- Reduced Azure Cosmos DB costs by 50% by redesigning and optimizing the notification persistence workflow for user-targeted messages.
- Improved request latency by 90% and increased the success rate to 99% through the implementation of an in-memory caching solution.

Infosys

Nuevo Leon, Mexico

Technology Analyst

August 2018 – March 2020

Infosys is a multinational information technology company that provides business consulting, information technology, and outsourcing services.

Technologies .NET Core, .NET Framework, C#, Angular, Redis, SQL Server

- Analyzed workflow and application data to diagnose and resolve issues causing stalled business processes, improving system reliability and process completion rates.
- Led the modernization of a legacy web forms application by migrating it to a contemporary technology stack, reducing technical debt.
- Redesigned the user experience through the implementation of a Single-Page Application (SPA), replacing callback-based interactions with responsive workflows and modern, user-friendly UI controls.

Ordico

Chiapas, Mexico

Jr. Software Engineer

December 2015 – December 2017

Ordico is an information technology company that provides business consulting.

Technologies .NET Framework, C#, SQL Server, WPF

- Contributed to the design, development, and enhancement of a comprehensive hotel management system, supporting core operational and business processes.
- Designed and implemented the timeshare management module, translating business requirements into scalable software solutions that supported reservations and operational workflows.

Education**Polytechnic University of Chiapas**

Chiapas, Mexico

Software Development Engineer

Graduation Year: 2015

Monterrey Institute of Technology and Higher Education

Nuevo Leon, Mexico

Master in Applied Artificial Intelligence

Graduation Year: 2026

Languages

- **Spanish** Native
- **English** C1

Skills**Programming Languages**

C#, TypeScript, JavaScript, Python, SQL

Cloud & AWS

AWS, Lambda, Step Functions, CDK, CloudWatch, DynamoDB, SQS, Serverless Architecture, Infrastructure as Code (IaC)

Frameworks

.NET Framework, .NET Core, ASP.NET Core, React, NodeJs

Databases

DynamoDB, SQL Server, Snowflake, Azure Cosmos DB, MongoDB

Tools

Git, GitHub Actions, Docker, Terraform, REST APIs, GraphQL, Serverless Stack (SST)
