Experience

Dyamanto

Sr. Software Engineer

Chiapas, México (Remote)

January 2026 – Current

Working for ICW, an American Insurance Company,

- Performed log analysis and root-cause investigations to diagnose system issues, including API request throttling and service performance anomalies.

Infovision

Sr. Software Engineer

Nuevo León, México (Remote)

May 2024 - January 2026

Working for Vizio, an American Smart TV manufacturer.

- Performed log analysis and root-cause investigations to diagnose system issues, including API request throttling and service performance anomalies.
- Developed and maintained voice-control integrations for Google Assistant, Amazon Alexa, and internal voice recognition technologies, enhancing user interaction and accessibility.
- Planned and executed the migration from Node.js 14 and AWS SDK v2 to Node.js 18 and AWS SDK v3, completing the project before the support deadline while maintaining service reliability and minimizing operational risk.

Kambda

Sr. Software Engineer

Nuevo León, México (Remote)

May 2021 – May 2024

Working for Goodleap, a U.S. based fintech company that provides financing and software solutions for sustainable home improvements.

- Architected and delivered a long-running AWS Lambda-based reporting solution using Serverless Stack (SST), Node.js, and TypeScript, enabling automated generation of sales reports.
- Designed and implemented GraphQL APIs, including queries and mutations, to deliver new business capabilities and optimize data access patterns.
- Contributed to the development of a scalable event-driven architecture, implementing event-based integrations and asynchronous processing across distributed services.

Epicor

Sr. Software Engineer

Nuevo León, México

March 2020 – May 2021

Epicor is a SaaS provider of ERP, CRM, SCM, and HCM that are aimed at the manufacturing, distribution, retail, and services industries.

- Reduced Azure Cosmos DB costs by 50% by redesigning and optimizing the notification persistence workflow for user-targeted messages.
- Improved request latency by 90% and increased the success rate to 99% through the implementation of an in-memory caching solution.

Infosys

Technology Analyst

Nuevo León, México

August 2018 – March 2020

Infosys is a multinational information technology company that provides business consulting, information technology, and outsourcing services.

- Analyzed workflow and application data to diagnose and resolve issues causing stuck business processes, improving system reliability and process completion rates.

- Led the modernization of a legacy web forms application by migrating it to a contemporary technology stack, reducing technical debt.
- Redesigned the user experience through the implementation of a Single-Page Application (SPA), replacing callback-based interactions with responsive workflows and modern, user-friendly UI controls.

Ordico

Chiapas, México

Jr. Software Engineer

December 2015 – December 2017

Ordico is an information technology company that provides business consulting.

- Contributed to the design, development, and enhancement of a comprehensive hotel management system, supporting core operational and business processes.
- Designed and implemented the timeshare management module, translating business requirements into scalable software solutions that supported, reservations, and operational workflows.
